

Guidelines for Requesting Software

The published software acquisition list will state “campus /university wide license” where this is the case. This designation means that the product is available to any department for installation on their computers. In some cases the product may even be legitimately installed on a lecturer’s personal computer. Where users are unsure of this they must call the MITS administrator for confirmation.

Where licenses are acquired in counted quantities they are available on the basis of the requests which determined the count.

To-date the following categories of software have been selected for central (MITS) funding. The products selected will vary from time to time.
